First thing's first, what every property owner should know...

Regarding the importance of sewer safety, we advise our customers to do regular maintenance 3-4 times a year to prevent blocked catch basins, manholes, storm drains and sewer lines inside or beyond the outside walls of your residential, commercial and industrial buildings from your property line up until the city property line.

Dayton Plumbing Services Ltd. is committed to providing our customers with safe and reliable services for your sewer systems because we want you to be aware of potential drain issues that may arise if vertical and horizontal drain pipes are not maintained properly above and underground. A problem could develop within your drain line without your knowledge but with regular maintenance, you can be aware of any issues before they become large costly problems like back-ups and flooding with the potential to cause serious damage to your property.

Our team has years of experience in drain cleaning and maintenance in Ontario. We are licensed, insured, and have WSIB clearance. We know how a drain should work at its full potential and we can provide you with the services you need to get those results. We are here to help you regarding your sewer service lines blockage or any plumbing needs you may have.

For your knowledge, we do schedule maintenance for drain services up to 12 months in advance. We offer a one year drain maintenance package at a discounted price. It includes 1 snaking and 1 power flush service 4 times a year which will be performed every 3 months. This service is for the main drain but does not include all the branches.

We can schedule to have our team on site at a time that is convenient for our customers to trouble shoot any drain problems. We can perform a clear and complete camera inspection of sewer lines to determine any existing or possible future problems that may arise.
